

Tools, OSINT & Open Source

▣▣ OSINT & Data Discovery Tools

These tools are useful for uncovering publicly accessible information, exposed data, malware indicators, code leaks, documents, and file indexing across the internet.

▣▣ Privacy Search Engines

- [DuckDuckGo](#) – Privacy-focused search engine that doesn't track users.
 - [Startpage](#) – Google results with privacy protection and no tracking.
-

▣▣ Paste, Code, and Source Scanning

- [psbdmp](#) – Largest archive of leaked {paste} dumps from pastebin-style sites.
 - [Search-Pastebin](#) – Google CSE-powered meta-search across 33 paste sites.
 - [RedHuntlabs Online IDE Search](#) – Search keywords across online IDEs, code sharing platforms, and pastebins.
 - [NerdyData](#) – Find websites using specific technologies or HTML/JavaScript code.
 - [Publicwww](#) – Source code search engine indexing 480+ million pages.
 - [CybDetective Code Search](#) – Custom search across 20+ code hosting platforms.
 - [grep.app](#) – Fast regex-capable search engine for 500k+ Git repos.
 - [searchcode](#) – Search 75 billion lines of code from 40 million public projects.
-

▣▣ File & Directory Indexing

- [Open Directory Search Tool](#) – Search files in unprotected open directories.
- [Mamont FTP](#) – Largest public FTP search engine.

- [**NAPALM FTP Indexer**](#) – Index of over 894 million FTP files across thousands of servers.
 - [**DeDigger**](#) – Discover publicly shared files in Google Drive.
 - [**UVRX**](#) – Search files from older hosting sites (e.g., Mega, Mediafire, Zshare).
-

☐☐ Document & Content Discovery

- [**PDF Drive**](#) – Download from a library of over 75 million free PDFs.
 - [**SlideShare**](#) – Explore millions of user-submitted presentations.
 - [**Scribd**](#) – Document repository with 195+ million user-uploaded files.
-

☐☐ Threat Intelligence & IOC Lookup

- [**VirusTotal**](#) – Multi-engine scanner and IOC search platform for files, hashes, domains, and URLs.
- [**Hybrid Analysis**](#) – Free malware sandbox that performs hybrid static/dynamic analysis.
- [**Sucuri SiteCheck**](#) – Website malware and security scanner.
- [**URLhaus**](#) – Malicious URL tracker and database.
- [**Feodo Tracker**](#) – Monitor and block IPs related to Feodo/Bugat/Dridex botnets.
- [**SSL Blacklist**](#) – Collection of blacklisted SSL certificates and JA3 fingerprints.
- [**MalwareBazaar**](#) – Repository for sharing malware samples.
- [**Talos Reputation Center**](#) – IP, domain, and file reputation check.
- [**PaloAlto URL Filtering**](#) – Link classification and reputation check.
- [**OTX AlienVault**](#) – Threat sharing platform with global IOC and pulse feeds.
- [**URLScan**](#) – Scan and analyze websites in a sandboxed environment.
- [**McAfee Threat Center**](#) – Threat intelligence and malware information.
- [**National Vulnerability Database \(NVD\)**](#) – US government vulnerability database with CVSS scores.
- [**CVE Database**](#) – Public list of common vulnerabilities and exposures.
- [**Website Reputation Checker \(URLVoid\)**](#) – Checks domain/IP reputation using multiple sources.
- [**Google Safe Browsing Status**](#) – Checks if a site is flagged by Google Safe Browsing.
- [**Looky Luu**](#) – Online Sandbox for Domain Checks
- [**URLscan**](#) – Online Sandbox for Domain Checks

☐☐ Network, Routing, and Metadata Tools

- [Nmap](#) – Network scanner and host discovery tool.
 - [Yersinia](#) – Penetration testing tool for attacking network protocols.
 - [Passive OS Fingerprinter \(p0f\)](#) – Passive network OS fingerprinting tool.
-

☐☐ Offensive Security & Exploitation

- [Kali Linux](#) – Penetration testing and security auditing Linux distribution.
 - [Metasploit](#) – Exploit development and penetration testing framework.
 - [Aircrack-ng](#) – Wireless network security auditing tool.
 - [Powerfuzzer](#) – Automated web application vulnerability scanner.
 - [ShellNoob](#) – Shellcode writing toolkit.
 - [Backdoor Factory](#) – Patch binaries with custom backdoors.
 - [Capstone Engine](#) – Multi-architecture disassembly framework.
-

☐☐ Analysis & Development Utilities

- [CyberChef](#) – Web-based data transformation and analysis toolkit.
 - [CyberChef \(Offline\)](#) – Local instance for offline data analysis and transformation.
 - [JavaScript Beautifier](#) – Formats and beautifies JavaScript code for readability.
 - [UnPacker](#) – JavaScript deobfuscation/unpacking tool.
 - [Awesome Malware Analysis](#) – Curated list of malware analysis tools and resources.
-

☐☐ News & Security Feeds

- [Inside-IT](#) – Swiss IT and tech news.
 - [Heise Security - 7-Tage-News](#) – German IT security news overview (last 7 days).
 - [CERT-EU News Monitor](#) – EU cybersecurity news and advisories.
-

☐☐ Disposable Email Services

- [Trash-Mail](#) – Temporary disposable email inbox.
 - [Mailinator](#) – Public temporary email service.
-

☐☐ Internal/Local Resources

- [Sandbox](#) – Likely internal sandbox environment for testing malware or files.
 - [DPI \(NetWitness\)](#) – Network analysis and deep packet inspection tool (internal link).
-
